WORK EXPERIENCE

Goodz Pvt. Ltd

Software Engineer

Jan 2026 - Present

- Designed and owned an end-to-end live delivery tracking product with GPS ingestion, real-time WebSocket updates, and an ETA model trained on historical delivery times, cutting order-status support tickets **45%**.
- Built the customer order recommendation system, training a two-tower PyTorch model on order history that beat the baseline by **18%** on recall@10 and serving recommendations from Redis to lift repeat-order conversion **20%**.

Software Engineer

Jul 2024 - Aug 2025

- Engineered the core order service that handles placement, confirmation, dispatch, and delivery for **4,000+ orders a day** on Node.js and PostgreSQL, and hardened it with idempotent transitions to cut stuck-order rates **40%**.
- Owned product development for vendor payouts and reconciliation, replacing a manual spreadsheet workflow with an automated nightly job that cut reconciliation from **2 days to 20 minutes**.
- Traced a production outage during a 20x holiday traffic spike to a saturated database connection pool and fixed it with a Redis caching layer, cutting p99 latency **97%** with zero downtime.
- Designed and built a custom high-performance data grid for 50,000+ order records, cutting rendering lag **73%**.

Youro

Software Engineer Intern

Aug 2025 - Dec 2025

- Owned full-stack development of a patient-facing urology telehealth platform, from authentication and appointment booking to doctor-patient chat and medication tracking, and shipped it to production in **4 months**.
- Partnered with the founding urologist to design an adaptive intake questionnaire that compiles patient answers into a pre-consult report, cutting review time from **~15 minutes to under 4**.
- Rebuilt the API client layer with request deduplication, response caching, and refresh-token rotation, cutting redundant backend calls **30%** and closing a token-replay security gap.
- Built an AI diagnosis-assist tool that uses an LLM to pull symptoms from intake reports and a RAG layer trained on clinical guidelines to rank likely diagnoses, matching the urologist's diagnosis on **85%** of consults.

PROJECTS

Two-Tier RAG Log-Anomaly Detector | SUNY Research Foundation

Apr 2026 - May 2026

- Built a two-tier anomaly detector using small language models across **4.7M+ log lines**, cutting inference latency **78%**.
- Parsed four log formats with strict chronological splits, then validated the model live on a Kafka stream.

Image Indexing & Semantic Search | UB Research | Python, FastAPI, FAISS, CLIP

Feb 2026 - Mar 2026

- Indexed a client's photo archive using InsightFace for face tags and RAM for object tags, keeping CPU load low.
- Built a hybrid search pipeline that pre-filters candidates in SQLite before running CLIP and FAISS vector search.

HealthAI Connect | Python, Flask, LangChain, FAISS

2025

- Built a multi-modal diagnostic platform with a RAG chatbot over ~9,000 records, hitting **98.5% accuracy**.
- Published in Taylor & Francis *AI Frontiers*.

SKILLS

- Backend Tech:** Python, Node.js, FastAPI, Flask, Spring Boot, REST APIs, WebSockets, SQLAlchemy
- Frontend Tech:** React, TypeScript, Tailwind CSS
- Infrastructure & Databases:** PostgreSQL, Docker, AWS (S3, CloudFront), Kafka, Redis, MySQL, Neo4j, Git
- Testing:** pytest, JUnit, Jest, RTL
- AI & ML:** PyTorch, LangChain, RAG, FAISS (vector search), recommender systems

EDUCATION

University at Buffalo, SUNY | Master of Science in Computer Science and Engineering

May 2026

Osmania University | Bachelor of Engineering in Information Technology

Jun 2024
